254-859-5779 fax

We are pleased to provide you with the 2015 Drinking Quality Report. This report is designed to inform you about the quality water and service that we provide to you every day. Our goal is to provide you with a safe and dependable supply of quality drinking water. We want you to understand the continuing efforts we make to provide you the best quality drinking water available.

This report reflects the quality of our water and what it means. If you desire to learn more, you may call our office at 254-859-5700, or attend the monthly council meetings of the City of Bruceville-Eddy. The meetings are held the 2nd Thursday of each month at 6:30pm in the Bruceville-Eddy Municipal Building.

The City of Bruceville-Eddy Water Supply gets ground water from First Trinity Aquifer, and purchases treated Lake Belton surface water from Bluebonnet Water Corporation located in Moffatt, TX.

The City of Bruceville-Eddy monitors for contaminants in your drinking water. The enclosed tables contain all of the chemical constituents that have been found in our drinking water.

Most of the system's water is a mixture of both ground and surface water. The Bluebonnet Water Supply Corporation has not had any detects for the year of 2015, January 1st through December 31st. There are none listed here. Our wells that service the Friendly Oaks have naturally occurring fluoride.

Annual Drinking Water Quality Report

TX1550024

CITY OF BRUCEVILLE EDDY

Annual Water Quality Report for the period of January 1 to December 31, 2015

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

CITY OF BRUCEVILLE EDDY is Purchased Surface Water

For more information regarding this report contact:

Name **CITY OF BRUCEVILLE-EDDY WATER SUPPLY**

Phone **(254) 859-5700**

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono **(254) 859-5700**.

Sources of Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

SPECIAL NOTICE:

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

PUBLIC PARTICIPATION OPPORTUNITIES:

DATE: 2ND Thursday of each month

TIME: 6:30pm

LOCATION: 143 WILCOX DRIVE, EDDY, TX 76524

PHONE NUMBER: (254) 859-5700

To learn about future public meetings (concerning your drinking water) or to request to schedule one, please call us.

Information about Source Water Assessments:

The TCEQ completed an assessment of your source water and results indicate that some of your sources are susceptible to certain contaminants. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants may be found in this Consumer Confident Report. For more information on source water assessments and protection efforts at our system, contact **Koni Billings at (254) 859-5964**

For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL:
<http://www.tceq.texas.gov/gis/swaview>

Source Water Name	Type of Water	Report Status	Location	
1 – WESTRIDGE	WESTRIDGE	GW	A	1706 THERESA LN, MOODY, TX 76557
2 – EDDY	EDDY	GW	A	302 EAGLE DR, EDDY, TX 76524
3 – FRIENDLY OAKS	FRIENDLY OAKS	GW	A	588 OLD BETHANY TD, LORENA, TX 76655

SW FROM BLUEBONNET WSC	CC FROM TX0140162	SW	A	1706 THERESA LN, MOODY, TX 76557

Further details about sources and source-water assessments are available in Drinking Water Watch at the following URL:
<http://dww.tceq.texas.gov/DWW>

WATER LOSS:

In the water loss audit submitted to the Texas Water Development Board for the time period of January – December 2015 our system lost an estimated 104,748,087 gallons of water. Our system is only required a water loss audit every five years. If you have any questions about the water loss audit please call (254) 859-5700.

2015 Regulated Contaminants Detected

Lead and Copper

Definitions:

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	11/05/2014	1.3	1.3	0.0109	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	08/21/2013	0	15	4.64	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

Water Quality Test Results

Definitions:

The following tables contain scientific terms and measures, some of which may require explanation.

Avg: Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

MFL million fibers per liter (a measure of asbestos)

na: not applicable.

NTU nephelometric turbidity units (a measure of turbidity)

pCi/L picocuries per liter (a measure of radioactivity)

Water Quality Test Results

ppb: micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.
 ppm: milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.
 ppt parts per trillion, or nanograms per liter (ng/L)
 ppq parts per quadrillion, or picograms per liter (pg/L)

YEAR	DISINFECTANT	AVERAGE LEVEL	MINIMUM LEVEL	MAXIMUM LEVEL	MRDL	MRDLG	UNIT OF MEASURE	SOURCE OF CHEMICAL
2015	CLORINE AND CHLORAMINE	2.03	1.11	3.56	4.0	<4.0	Ppm	CHLORINE AND AMMONIA

Regulated Contaminants

Disinfectants and Disinfection By-	Collection Date	Highest Level Detected	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids (HAA5)*	2015	6	0 - 5.6	No goal for the total	60	ppb	N	By-product of drinking water disinfection.
Total Trihalomethanes	2015	13	0 - 27.5	No goal for the total	80	ppb	N	By-product of drinking water disinfection.
Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	11/05/2014	0.045	0.045 - 0.045	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Cyanide	04/14/2014	40	40 - 40	200	200	ppb	N	Discharge from plastic and fertilizer factories; Discharge from steel/metal factories.
Nitrate [measured as Nitrogen]	2015	0.26	0 - 0.26	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
Combined Radium 226/228	12/03/2013	0.95	0.95 - 0.95	0	5	pCi/L	N	Erosion of natural deposits.
Synthetic organic contaminants	Collection Date	Highest Level Detected	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
Atrazine	2015	0.15	0 - 0.15	3	3	ppb	N	Runoff from herbicide used on row crops.
